

FOR TODAY. FOR TOMORROW
FOR GOOD.[™]

COMMERCIALLY COMPOSTABLE
RECYCLED CONTENT
RENEWABLE RESOURCES

FEATURING

Eco-Forward® single-use products for the foodservice industry

GOOD FOR BUSINESS. GOOD FOR EVERYONE.

COMMERCIALLY COMPOSTABLE, RECYCLED CONTENT, RENEWABLE RESOURCES

Solo Foodservice is committed to making a positive difference to the environment, offering a full portfolio of Eco-Forward® products with various environmental attributes. Solo will continue to bring single-use packaging innovations to the marketplace utilizing sustainability criteria that meets or exceeds Solo's high standards of product function, quality and reliability.

Solo demonstrates this commitment to the environment by working toward sustainable solutions that optimize the use of recycled, recyclable, commercially compostable or renewable resource materials. Initiatives and programs to reduce our environmental footprint and those of the products we make cross all of our operations and functions.

Eco-Forward® Product Requirements

RENEWABLE RESOURCES

A naturally occurring resource that can replenish itself naturally. They include corn, bagasse and trees.

POST-CONSUMER RECYCLED CONTENT

Supporting the use of post-consumer recycled content is a key tenet of Solo's Eco-Forward® platform. Requiring post-consumer recycled materials, instead of post industrial sources, encourages consumer recycling and creates market demand for consumer recycled materials. Solo's Eco-Forward® offering includes products made with recycled PET water bottles and containers and paper collected from offices and school recycling programs.

COMMERCIALLY COMPOSTABLE

In a number of communities, commercially compostable products are the preferred environmental choice. Solo's products identified as commercially compostable meet the ASTM D6868 or D6400 standard for compostability and are compostable in a commercial compost facility. Appropriate commercial composting facilities may not exist in your community. Please check with your local municipality. Not suitable for backyard composting.

To find a composter in your area, go to findacomposter.com

Material Profiles

Poly-lactic Acid (PLA)

A material made from plant-based renewable resources.

Single-Sided Poly-lactic Acid (SSPLA)

A material made from plant-based renewable resources that is applied to a single side of a PLA container, providing additional heat tolerance.

Bagasse (Sugarcane)

A fiber material made from used sugarcane stalks, which is a renewable resource.

Post-Consumer Recycled Content PETE Plastic (RPET)

Recycled plastic used from water bottles and other containers after consumer use.

Post-Consumer Recycled Content Fiber (PCF)

Paper fiber that has been recovered and recycled after consumer use.

Bare® by Solo® Brand

Solo is **Bringing Alternative Resources** for the **Environment** with a broad environmental platform. Bare® by Solo offers a large breadth of Eco-Forward® single-use cup, dinnerware and food container solutions to meet every packaging need. Bare® by Solo can accommodate operators needs with a variety of neutral colors and complementary prints, by providing an assortment of mix-and-match options to compliment any décor or occasion.

Post-Consumer Fiber (PCF) Paper Hot Cups

RECYCLED CONTENT
RENEWABLE RESOURCES

FEATURES & BENEFITS

- First-ever, FDA-compliant, PCF paper hot cup
- Made from 90% plant-based renewable resources and a minimum of 10% post-consumer recycled fiber
- Less virgin material used to make PCF hot cups, reducing the impact on valuable natural resources
- Ideal for hot beverage applications
- Paperboard that is from a Forest Stewardship Council (FSC) or Sustainable Forestry Initiative (SFI) certified fiber source
- One lid fits five cup sizes
- Custom print capabilities
